Coding Guidelines:

Routes

- All calls to the db must be separate functions to keep the routes clean
- Larger functions be put in util.py
- Snake casing for function names and variable names
- All variable and function names must be descriptive
- Comments describing more verbose coding sections
- All larger links or constants should be set as global constants

HTML

- Indents should be 2 spaces

Definition of Done:

Unit tests

- Must have a manual testing guideline that covers all the parts of the new code
- Must pass all of those test
- Once code is working refactor
- Once the refactored code passes all the test it is ready for code review

PR request code reviews

- All new code added to the main branch must be reviewed by another team member
- All new code must be easy enough to explain to all of the other team members during code review
- Once code has been reviewed, PR request may be merged
- Task is officially done once explained during scrum meeting
